REVIEWER INDEX

to Volume 99, September–December 1981

Below is a list of the people who reviewed manuscripts for GENETICS during the preparation of Volume 99.

The aim of GENETICS is to communicate significant research. To succeed, we must recognize what is significant; we must make sure the presentation is accurate, unambiguous and yet readable. For this we depend heavily on our reviewers, who perform this indispensible service without reward. The quality of the journal can be no better than the quality of their efforts. We apologize to any reviewer whose name has been inadvertently omitted, and we are sincerely grateful to all.

ADAMS, G. M. W.
ASMUSSEN, M.
AVISE, J.

BAKER, W. K.
BELL, A. E.
BELOTE, J.
BYERS, B.

CAVENER, D.
CHAPMAN, V.
CHARLESWORTH, D.
CLEGG, M. T.
COLEMAN, D.
COLLINS, R. L.

SUBJECT INDEX

to Volume 99, September–November/December 1981

aberrant ratio in maize, 481
Adh, maize, controlling element, 267

Aegilops, 487
Aegilops sharonensis, 495
allozymes, null allele frequencies, 151
aneuploid syndromes, 247
aneuploidy, 75
audiogenic seizures, 117

B genome of wheat, 495
barley strip mosaic virus, 481
broken chromosomes, 383

Caenorhabditis elegans, 415
categorical variables, 357
cell proportioning, 183
chickens, 309
Chlamydomonas, 41
Chlamydomonas reinhardi, 371
chloroplast gene transmission, 371
chromosome structure, 383
concerted evolution, 555
controlling element, maize, 275
correlated response, 513
crossover suppressor in *C. elegans*, 415
cytoplasmic compatibility, 495
cytoplasmic diversity, 487
cytoplasmic-nuclear interaction, 169

deletions, 75
Dictyostelium discoideum, 183
distribution of induced mutations, 461
dosage manipulation in maize, 247
Drosophila melanogaster, 49, 65, 75, 99, 127, 151, 211, 429, 443, 461
duplications, 75

effective number of loci, 541
electrophoretic variation, 1
embryonic lethality caused by enzyme deficiency, 65
enzyme activity variation, 127
Escherichia coli, 1, 25
evolution, 495, 541

fate-mapping, 211
fertility, male, 49
Fisher's fundamental theorem, 365
fitness changes for two loci, 365
fraction I protein, 487
fundamental theorem, 365

γ-glutamyl cyclotransferase isozymes, 109
gene-band relationships, 461
gene expression, 247
genetic correlation, 555
genetic correlation, realized, 513
genetic location of *tuh-3*, 99
genetic structure of populations, 1
glucose-6-phosphate dehydrogenase, 127
glutamate dehydrogenase, 405
gynodioecy, evolution, 169

haploidy, 525
heritability, 357
heritability, 357
heterochromatic, recombination, 443
heterochromatin, sex chromosome, 49
high pressure seizure, 285
hitchhiking, gene-frequency, 337
homoeotic mutation tumorous-head, 99

inversions, manipulation of, 75

karotype, 495

linkage disequilibrium, dynamics, 337
linkage estimation, 157
litter size, 513

maize, 247, 267, 275, 481
male sterility, inheritance, 169
maternal-effect gene, 443
mathematical models of gynodioecy, 169
mating behavior, 211
mating type, 41
meiotic mutant, yeast, 197
mitochondrial enzymes, 65
mitotic instability, 383
mitotic recombination, induced, 443
mosaics, genetic, 211
mouse, 109, 117, 285, 513
multigene families, 555
mutable maize *Adh* allele, 267

mutagenesis, UV, 25
mutation, 405

natural selection, 365
Neurospora crassa, 405
neutral gene hypothesis, 1
Notch locus, 65
Notch mutations, biochemical effects of, 65
null allele fitness, mutations, 151

pattern preference behavior, 211
plasmid, pkM101, 25
polyploid species, origin of, 487
population crosses, 541
quantitative characters, 541
quantitative genetics, 525
quasi-continuous characters, 357

reciprocal translocations, 45
recombination, 383
recombination between inversion breakpoints, 75
recombination in *C. elegans*, suppression of, 415
recombination rate, 1
recombination system, 231
repair mutagenesis, pkM101, 25
restorer gene, maintenance, 169
ribosomal genes, 443

Saccharomyces cerevisiae, 197, 383
scaling, 357
selection, periodic, 1
selection response, temporary, net, 309
sex transformation, 429
sexual differentiation, 41
silkworm, 231
6-phosphogluconate dehydrogenase, 127
slime mold, 183
somatic cell fusion, 371
species crosses, 541
sterility, male, 49

testis weight, 513
theoretical population genetics, 555
threshold characters, 357

UV mutagenesis, specificity of, 25

virus-induced mutation, 481
vitellogenin, 429

wheat, 487, 491
wx locus, controlling elements, 275
wx structural gene, 275

X-ray-induced mutations, 461

yeast mating type, 383
